

Document Functional Overview

The **Automated Employee Onboarding & Offboarding System** is designed to streamline and automate the employee lifecycle, from hiring to separation. The system reduces manual effort, improves accuracy, and ensures that all onboarding and offboarding activities are completed efficiently and in accordance with organizational policies.

Functional Overview

1. Employee Registration

- Capture new employee information.
- Store personal, job, and contact details securely.
- Generate a unique Employee ID.

2. Onboarding Management

- Automate onboarding workflows.
- Assign tasks to HR, IT, managers, and other departments.
- Track completion of onboarding activities.
- Generate joining documents and employee credentials.

3. Document Management

- Upload, verify, and maintain employee documents.
- Store offer letters, identity proofs, contracts, and policy acknowledgments.
- Provide secure access to authorized users.

4. Task and Workflow Automation

- Assign onboarding and offboarding tasks automatically.
- Send reminders and notifications for pending activities.
- Track task status and completion.

5. Employee Access Management

- Create email accounts and system credentials during onboarding.
- Assign software licenses and access permissions.
- Revoke access automatically during offboarding.

6. Asset Management

- Record allocation of company assets such as laptops, ID cards, and mobile devices.
- Monitor asset returns during employee exit.
- Maintain asset history for audit purposes.

7. Offboarding Management

- Initiate employee exit requests.
- Automate exit approval workflows.
- Generate exit clearance checklists.
- Process final settlements and documentation.

8. Dashboard and Reporting

- Display real-time onboarding and offboarding status.
- Provide employee statistics and workflow progress.
- Generate reports for HR and management.

9. Notification System

- Send automated email or system notifications.
- Inform users about pending approvals, completed tasks, and workflow updates.

10. Security and User Management

- Support role-based access for HR, managers, IT staff, and administrators.
- Protect employee data through authentication and authorization.
- Maintain audit logs of system activities.

Summary

The system integrates employee management, workflow automation, document handling, asset tracking, and reporting into a single platform. By automating repetitive tasks and improving coordination between departments, it enhances efficiency, reduces processing time, improves data accuracy, and provides a secure and transparent employee onboarding and offboarding process.
